2011 ABC Cohort Outcomes - Arkansas	520
2011 ABC Cohort Outcomes - Districts	521

Late Elementary Outcomes for Children Participating in Arkansas Better Chance Program

State-funded preschool programs have become increasingly common across the country, having been established to some extent in up to 45 states. Moreover, in the 2015-16 school year, 32 states and the District of Columbia raised funding levels for their preschool programs. While the services that these programs provide to families are influenced by the environments in which they are found, a main goal of all state-funded preschool programs is the preparation of young children for kindergarten and elementary school. Effective preschool programs lay a foundation for children's subsequent school success by imparting the varied knowledge, abilities, and dispositions children need to succeed in school.

Previous research has established that high-quality and well-funded preschool programs make valuable contributions to improving children's learning and development (Barnett, 2002; Young, 2016) and have a valuable economic return (Heckman, 2006, 2011; Karoly, 2016). Studies of model prekindergarten programs including the Abecedarian Early Childhood Intervention program, the High/Scope Perry Preschool program, and the Chicago Child-Parent Centers have shown that these types of programs produce economic benefits that are much greater than their costs (Barnett, 1996; Mase & Barnett, 2002; Reynolds, Temple, Robertson, & Mann, 2002). The benefits of preschool education include higher scores on achievement tests and lower rates of special education placements and grade repetition, as well as longer-term effects such as improved high school graduation rates and reduced levels of crime and delinquency (Camilli, Vargas, Ryan, & Barnett, 2010; Ramey, Campbell, Burchinal, Skinner, Gardner, & Ramey, 2000; Reynolds, Temple, Robertson, & Mann, 2001).

Although state-funded preschool programs are not as well funded as many of the model programs that have been intensively studied, the state programs are larger and serve more diverse populations. As the number of state-funded preschool programs grows and more children participate, it is increasingly important to determine how effective these programs are in improving children's potential for school success.

The Arkansas Better Chance (ABC) Preschool Program Context

The Arkansas Better Chance (ABC) state-funded program provides early care and education services for children from at-risk or low-income families. Expanded funding beginning in 2004 led to the creation of the Arkansas Better Chance for School Success (ABCSS) Program, which follows the same policies as the ABC initiative, but targets districts in which at least 75 percent of children have literacy and math scores below proficient levels. Arkansas is a national leader in the standards it has set for its programs in seeking to provide quality preschool environments, and it is important to know more about the impacts of those programs on children's learning.

This report demonstrates the effects of the Arkansas Better Chance program (ABC) on late elementary outcomes (third through sixth grades). End of year assessments, which varied over the course of the study years, were examined for students of three preschool cohorts

(2009, 2010, 2011). Students included in the statewide study received free lunch all years and were enrolled in Arkansas public schools for all years associated with their testing data. Students included in the district level study received free lunch in Kindergarten and were enrolled in an Arkansas public school at the time of testing. A limitation of this study is that it is possible children with private preschool experiences have been included in the ‘No Known PreK’ (NKP) study group due to incomplete kindergarten registration data. The results of the study show that the Arkansas Better Chance program has statistically significant and meaningful impacts on children’s late elementary assessment outcomes.

Methods

In order to establish the study cohorts, rules were established to identify the ABC cohort and the No Known PreK (NKP) cohort. Cohort rules were slightly different for the full Arkansas cohort versus the district level analysis to allow for greater cell counts at the district level.

To be included in this study, children must have been five years old at the time of entering Kindergarten or clearly attending Kindergarten for the first time, must be present in Arkansas Department of Education (ADE) data on or after October 1 of every applicable year, and must have been enrolled in free lunch program every applicable year (for the Arkansas report) or may have been enrolled in free lunch any of the years of their cohort (for the District reports). For the ABC cohort, children must have attended an ABC program for seven hours or more per day in the year prior to their Kindergarten entry. For the NKP cohort, children must not have any PreK indicator on their ADE record nor may they have been enrolled ABC for less than seven hours per day.

The resulting sample for the statewide cohort varied slightly in size from cohort to cohort and from year to year, but had no great swings. Similarly, distribution of race a gender remained fairly constant. Table 1 contains the counts for each cohort in each year; Figures 1 and 2 show the distribution of race and gender, respectively, using 2009 cohort data. The differences in demographics between the ABC cohort and the NKP cohort are not surprising. Gender is split consistently, with slightly more girls than boys in the ABC cohort. The ABC cohort also has more African American children than the NKP cohort, but fewer White and Hispanic children. For the purposes of this study, only children who received free lunches for all relevant years were included.

Table 1. Cohort Counts

Cohort	Grade	ABC	NKP
2009	03	2,806	1,479
	04	2,781	1,446
	05	2,794	1,460
	06	2,765	1,439
2010	03	3,274	1,654
	04	3,299	1,654
	05	3,267	1,634
2012	03	3,830	2,161
	04	3,766	2,114

Figure 1a. Gender distribution of ABC cohort.

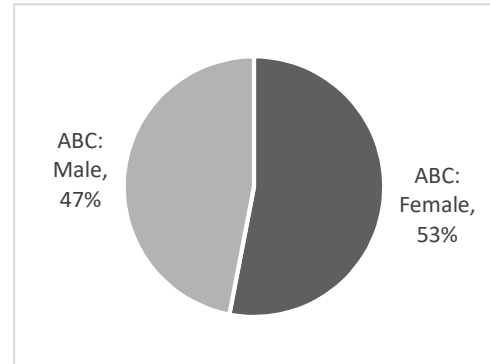

Figure 1b. Gender distribution of NKP cohort.

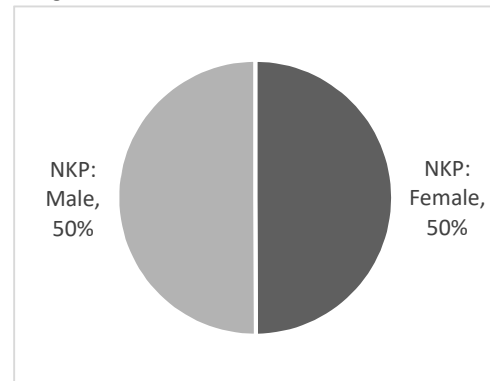

Figure 2a. Distribution of races of ABC cohort

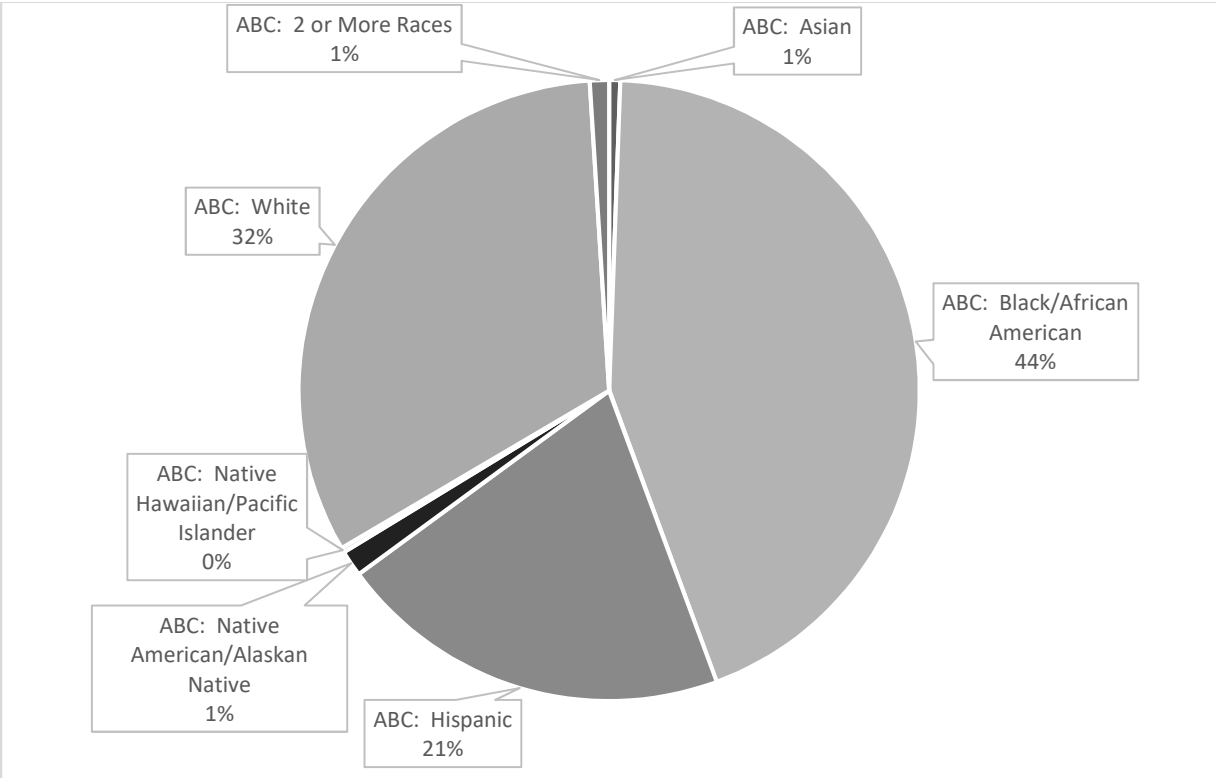

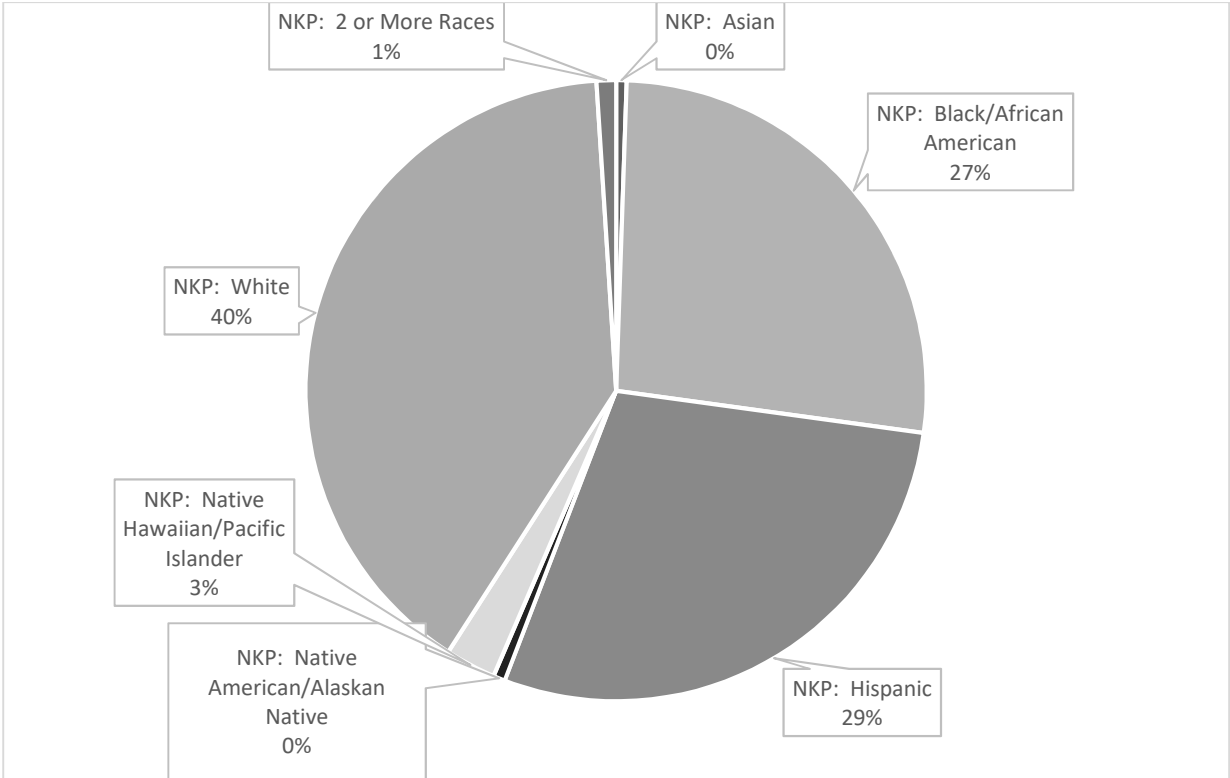

Figure 2b. Distribution of races for NKP cohort.

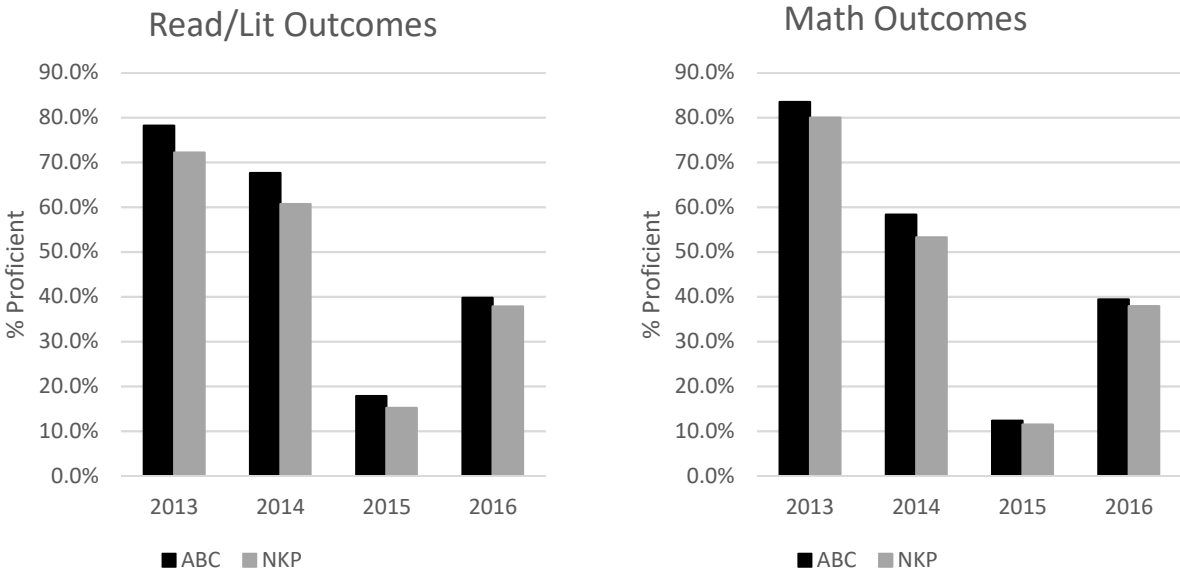

Results

The results of the longitudinal study are promising for the Arkansas Better Chance program. Overall, ABC students perform better on state assessments than children who did not attend ABC PreK. An important note for analysis of these results is the change in assessments over the study period. The Arkansas Benchmark test was used in 2013 and 2014, the PARCC was used in 2015, and the ACT Aspire was used 2016.

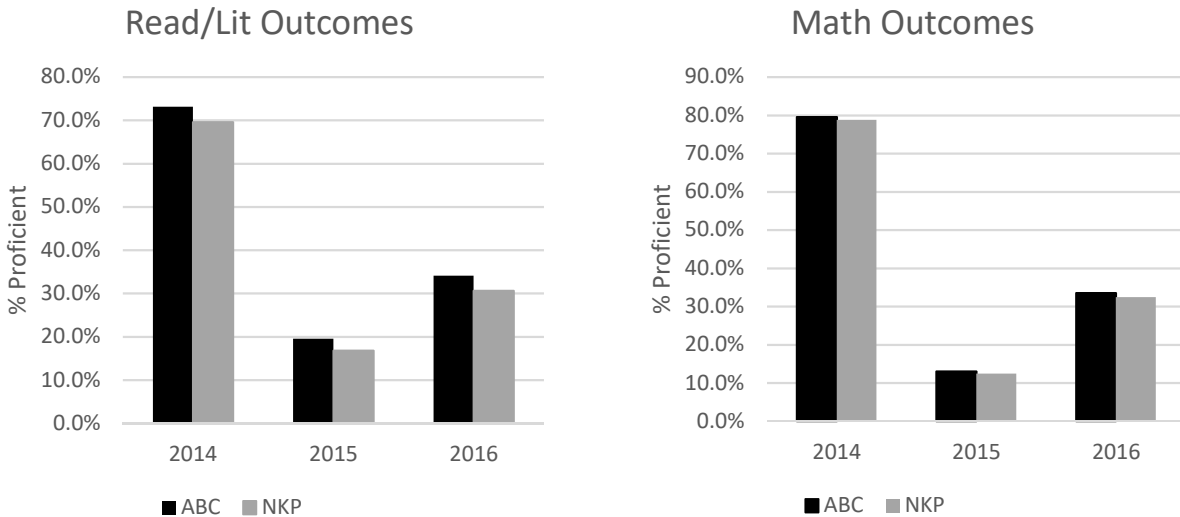

The 2009 ABC cohort had more students score proficient than the No Known PreK (NKP) cohort in reading (2013: $p < 0.001$, 2014: $p < 0.001$, 2015: $p < 0.01$) and in math (2013: $p < 0.01$, 2014: $p < 0.01$).

Figure 3. 2009 cohort outcomes.

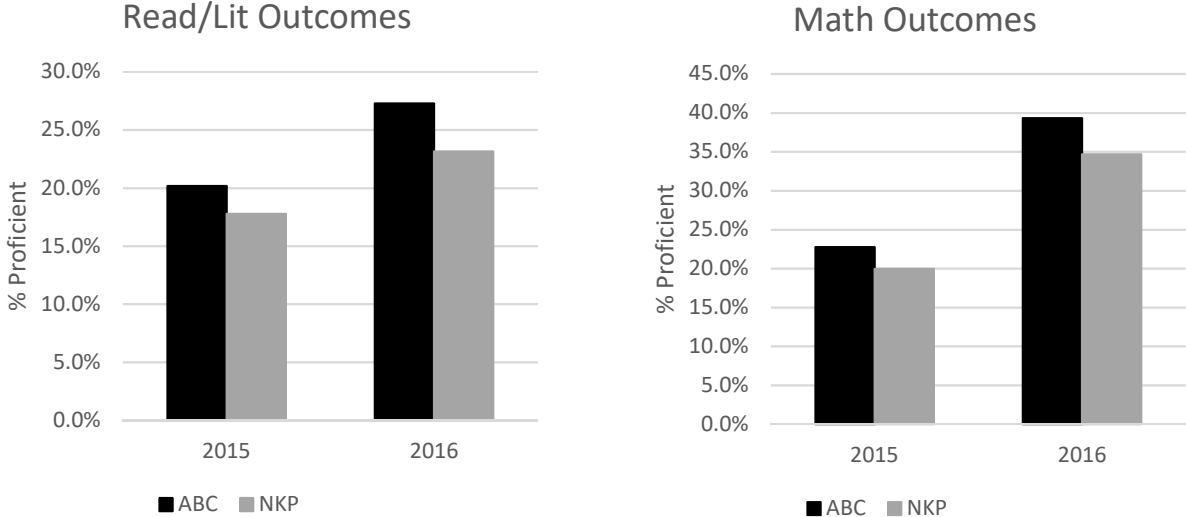

The 2010 ABC cohort had more students score proficient that the No Known PreK cohort in reading (2014: $p < 0.01$, 2015: $p < 0.01$, 2016: $p < 0.01$), but not in math.

Figure 4. 2010 cohort outcomes.

The 2011 ABC cohort had more students score proficient than the No Known PreK cohort on all assessments: reading (2015: $p < 0.02$, 2016: $p < 0.001$), math (2015: $p < 0.02$, 2016: $p < 0.001$).

Figure 5. 2011 cohort outcomes.

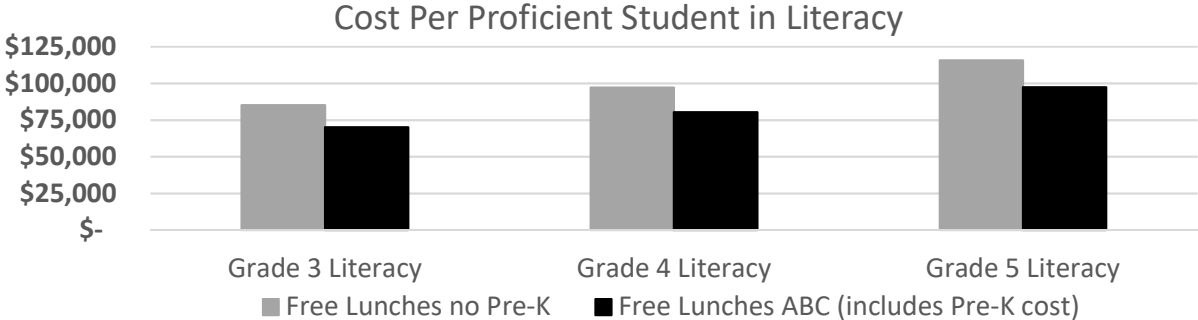

Conclusion

The Arkansas Better Chance program has an income requirement for eligibility. Children living in homes with greater than 200% of the federal poverty level are ineligible to participate in the program, unless they meet other at-risk factors (special needs, teenage mothers, etc.). Moreover, ABC serves more children of color than the general population. In spite of the risk factors and a pervasive academic achievement gap, students who attend ABC programs are performing better on state assessments than children who have not participated in a PreK program throughout elementary school.

In comparing the ABC cohorts to the NKP cohorts, the results clearly show two distinct groups with two distinct outcomes; the ABC cohorts consistently produces more academically proficient students. These results mean lower grade retention for ABC students and greater economic efficiency for educating these children. Additional analysis of the proficiency of ABC students versus NKP students found that the state saved an average of \$2.77 for every dollar spent on ABC PreK with greater savings each year (3rd grade savings: \$2.37; 4th grade savings: \$2.85; 5th grade savings: \$3.10) (ARC, 2017).
