

Arkansas Better Chance (ABC) Helps Students Start Kindergarten Ready

Early childhood education is a powerful tool in preparing students for kindergarten. Research on early childhood education is abundant and shows that early childhood education has positive impacts for students, as well as economic gains for the nation. Children who participate in pre-k programs require less special education and are less likely to repeat a grade. High-quality early childhood education also reduces the cost of educating children in the K-12 system. Children who receive early education have higher incomes upon entering the labor force, which results in higher taxes paid back to society. They are less likely to engage in criminal activity, both as juveniles and as adults. The estimated overall annual budgetary, earnings, and crime benefits are \$315 billion by 2050.¹

These findings have also been found to hold true through adulthood. The High/ Scope Perry Preschool Program (Ypsilanti Public Schools, Michigan) conducted a longitudinal cohort study in which 123 black children living in poverty and at risk of school failure were randomly assigned to preschool and no preschool groups from 1962-1967. They were assessed at the end of their preschool enrollment and again at ages 10, 15, 19, 27, and 40. The latest results, collected in 2005 and including 97% of the original study participants still living, showed that the adults who had participated in the program were more likely to have graduated from high school and gone on to get at least an Associate's degree, were less likely to have been arrested various types of crimes, including violent crime, drug related crimes, and property crimes, and were more likely to hold a job and have higher earnings. The researchers also estimated that for every dollar invested in the program the return to society through lower welfare costs, gains from education and salary, more taxes paid, and lower costs due to crime was approximately \$16.14, with \$12.90 returning to the public and \$3.24 returning to the participants.²

In Arkansas, researchers determined that the total cost of a universal pre-k serving all of Arkansas' 52,300 three- and four-year-old children is \$226 million. Moreover, the researchers also determined that universal pre-kindergarten would return \$1.58 to Arkansas for every dollar spent.³

All students entering public school in Arkansas take the Qualls Early Learning Inventory (QELI), a questionnaire based on teacher observations to identify student development in six areas: general knowledge, oral communication, written language, math concepts, work habits, and

attentive behavior.⁴ In the 2011-2012 school year, almost 10% more students receiving free lunch were scored 'developed' when entering kindergarten after participating in an ABC program than students who had no known pre-school.

The following report includes students entering public school kindergarten that have been identified as participating in an ABC program prior to enrollment. The comparison group are students entering kindergarten, not found in the ABC data, whose parents have also not indicated any other pre-school program (ie Head Start, private pre-school, etc.) when enrolling them for kindergarten. For any group to be included, at least ten students must have participated. For example, a school district may have only had five full price lunch students participate in ABC, therefore those results were not included in the final report.

The three sections of the report include aggregated data for all students entering kindergarten in Arkansas from 2008 through 2012; data disaggregated by the school district in which the student enrolled; and finally data disaggregated by the ABC agency the student attended.

Qualls Early Learning Inventory (QELI)

- Results aggregated for all students entering public schools upon completion of an ABC program
- other pre-k programs indicated for a student when enrolling in public school (ie Head Start, private pre-k) have not been included in this report
- n = number of children tested (a minimum of 10 children is necessary for privacy and integrity of sample size)
- % developed = percent of children categorized as a 2 (developed) in that area on the QELI

Qualls Early Learning Inventory (QELI)

- Results disaggregated by ABC AGENCY students were enrolled in prior to entering kindergarten
- other pre-k programs indicated for a student when enrolling in public school (ie Head Start, private pre-k) have not been included in this report
- n = number of children tested (a minimum of 10 children is necessary for privacy and integrity of sample size)
- % developed = percent of children categorized as a 2 (developed) in that area on the QELI
